## Appendix I

### Proposed Revision to Remittance Statistics

#### **Introduction**

Remittance has historically been defined by the balance of payments manual. The current balance of payments manual (BPM5) has been revised and a new edition BPM6 was published in December 2008. The revised definition results from an increased emphasis being placed on remittances as these flows have increased significantly in recent years. It was believed that a revision to the current definition was necessary which would provide further clarification as well as capture other flows considered remittances.

#### **Definition**

According to the fifth edition of the Balance of Payments Manual remittances to an economy are defined primarily by 'Workers Remittances'. Workers Remittances cover current transfers by migrants who are employed in new economies and considered residents there. The revised BOP manual proposes an expansion in the items considered remittances. First, the concept workers remittance is replaced with personal transfers. Secondly the concepts of personal remittances, total remittance and transfers to nonprofit institutions serving households are introduced. Within the balance of payments frame work, investments in the economy by migrants, such as bank deposits and portfolio investments are excluded from remittances.

**Personal Transfers** is a new concept that consists of all current transfers in cash or in kind made or received by resident households to or from non-resident households. It is independent of the source of income of the sender, irrespective of whether the sender receives income from labor, entrepreneurial or property income, social benefits, as well as any other type of transfers. It is also independent of the relationship between the households irrespective of whether they are related or unrelated individuals.

**Personal Remittances** represents personal transfers plus compensation of employees (less taxes, social contributions and transport & travel expenditures made by residents employed by non-residents) and capital transfers between households. Personal Remittances include all household-to-household transfers and the net earnings of non-resident workers. It should be noted that 'personal remittances' also include transfers originating from who are not migrant

workers. This definition therefore includes income that the households in a country receive from individuals abroad, regardless of whether the individuals abroad are resident in the country of their employment or not.

**Compensation of employees** comprise wages, salaries, and other benefits, in cash or kind, earned by individuals in economies other than those in which they are residents. Employees, in this context, include seasonal or other short-term workers (less than one year) and border workers who have centers of economic interest in their own economies.

**Capital transfers** result in a change in the stocks of assets of one or both parties to the transaction without affecting the savings of either party. Capital transfers in kind are transfers of ownership of non-financial assets or forgiveness of debt. A transfer of cash is a capital transfer only when it is linked to or conditional on the acquisition or disposal of a fixed asset.

**Total Remittances** include personal remittances and social benefits. Social Benefits are defined as “benefits payable under social security funds and pension funds.

A **nonprofit institution serving household (NPISH)** is an entity mainly engaged in providing goods and services to households, or the community, free of charge, or at prices that are not economically significant (and thus are classified as non-market producers), except those that are controlled and mainly financed by government units.

Three categories of remittances defined may be included as supplementary items: Personal Remittances, Total Remittances and Total Remittances & Transfers to Nonprofit Institutions Serving Households (NPISHs).

## **Conclusion**

Based on the results of the comparison between remittances currently reported (represented by private transfers & social benefits in table below) and BPM6, the overall change is not very significant. However, the gap between the two definitions is increasing steadily and this difference may become large if this gap continues to increase. The ‘current transfers to NPISH’ is the primary reason for this gradual divergence.
